

ReadyIQ — Demo Video Script & Checklist

“Test before the test” · Microsoft Agents League · Reasoning Agents — Challenge A

Must include (per challenge rules)

- **Length:** 5 min max — aim 2–3 min. Your own voice + screen only. Link the video in the GitHub README.
- **Show & explain the agent interaction:** Advocate → Examiner → rebuttal → Judge verdict.
- **Microsoft Foundry + Foundry IQ:** say it out loud; show cited claims (the IQ grounding).
- **Tool / MCP:** show the live Microsoft Learn MCP study links.
- **Reliability & oversight:** verification gate (refuses uncited) + manager approval gate.
- **Synthetic data only** — mention it. **Never** show terminal, .env, or keys.

Setup (2 min before)

- QuickTime → New Screen Recording, microphone ON. Record the browser tab only.
- Warm-run AZ-204 once, then reload to a clean page (so the live run is fast).
- Do Not Disturb on; bookmarks bar hidden.

Beat-by-beat (≈3:30)

SAY	ON SCREEN
1 · Hook (0:00–0:25) “Deciding if you’re ready for a certification is usually a guess — one score and a gut feeling. ReadyIQ puts readiness on trial: two AI agents argue both sides, a judge decides, every claim cited. It refuses to guess.”	Open ReadyIQ — the glass hero. Let the floating objects + title breathe for ~3s.
2 · A clear PASS (0:25–1:15) “I pick AZ-204. An Advocate argues ready; an Examiner argues the gaps — both grounded in the exam objectives and the candidate’s record via Foundry IQ . They rebut each other. Every claim links to its source.”	Select AZ-204 → Check Readiness. Scroll both columns. Click one citation open . Scroll to verdict: READY .
3 · An honest FAIL + live MCP (1:15–2:20) — the heart “Now a weaker candidate. The Advocate still fights for readiness — but the Examiner lands the blow: pipelines, 40–45% of the exam, at 54%. The Judge rules NOT YET and explains why. Then it calls the live Microsoft Learn MCP and pulls the current official study guide for exactly that gap.”	Select AZ-400 → run. Scroll to NOT YET + rationale. Scroll to “Study these next — live from Microsoft Learn”; hover a real link.
4 · Calibration + human gate (2:20–2:55) “DP-203 comes back ALMOST — one domain a point under the bar. Calibrated, not binary. And nothing acts on its own — the verdict waits for a manager. The agents have no authority alone.”	Quickly run DP-203 → ALMOST. Point to Manager review ; click Approved .
5 · Under the hood + vision (2:55–3:40) “Microsoft Foundry hosts the model; Foundry IQ grounds every claim; LangGraph orchestrates the three agents; a verification gate drops anything uncited; the Learn MCP brings live content. Synthetic data only. Embedded in the Learn portal, real progress would flow through Work IQ + Graph — same tribunal, your data, one click. ReadyIQ — test before the test.”	Show the ARCHITECTURE diagram (or expand the Reasoning trace). End on the hero.

Before you upload

- Under 5:00 (ideally ~3). Shows: a READY, a NOT_YET with live Learn links, a citation opened, the human gate.
- Said out loud: “Microsoft Foundry”, “Foundry IQ”, “Microsoft Learn MCP”.
- No terminal / .env / keys on screen. Upload to YouTube or Vimeo (Unlisted). Paste the link in the README + Innovation Studio.
